PROFESSIONAL SUMMARY

Data Analyst proficient in **SQL, Python, Advanced Excel, Machine Learning, Automations** and **PowerBI**, specializing in converting data to deliver measurable business outcomes. Experienced in exploratory analysis, dashboarding, and customer analytics to support data-driven decisions. Effective presenter of technical findings, working with product, engineering and marketing teams with a focus on data accuracy and business impact. Problem solver, ranked in the top 9% in LeetCode contests.

EDUCATION

Jalpaiguri Government Engineering College (JGEC)

Bachelor of Technology in Information Technology, CGPA: 8.06

Jalpaiguri, West Bengal

August 2023 – May 2027

EXPERIENCE

Product Operations Consultant

Apr 2026 – Present

AppBroda

- Built PRDs and coordinated with product and engineering teams to streamline workflows and drive automation initiatives
- Maintained real-time performance dashboards and supported content generation pipelines for data-driven operational monitoring
- Researched AdTech products and market trends to support cost optimization, product positioning, and strategic decisions

Data Science Intern

Aug 2025 – Nov 2025

Aim Digitalise

Certificate

- Cleaned and analyzed large datasets using SQL and Python, built Power BI dashboards and automated ETL pipelines, cutting manual reporting time by 30%
- Defined KPIs to uncover actionable customer insights and delivered data-backed recommendations that increased campaign ROI by 12%

PROJECTS

Hotel Bookings Analysis & Root Cause Investigation | *Python, Power BI, Data Analysis*

[Github](#)

- Analyzed 30,000 hotel bookings across 10 US cities, uncovering a 20.2% cancellation rate with peaks reaching 30.3% during high-demand periods
- Performed root cause analysis across booking channels, room categories, and hotel ratings, identifying Travel Agent bookings (27.93%) and Standard rooms (23.3%) as key cancellation drivers
- Developed 5 interactive dashboards and recommended pricing and upsell strategies to address a \$6,840 revenue opportunity between Web and Mobile App channels

Shop-Easy Marketing & Customer's Sentiment Analysis | *Python, SQL, Power BI, NLTK*

[Github](#)

- Analyzed marketing funnel and customer engagement data to identify drop-off points
- Conducted sentiment analysis on 1,300+ customer reviews using Python to extract actionable insights
- Developed targeted content and promotional strategies using seasonal and engagement patterns

TECHNICAL SKILLS

Core Analytics: Data Analysis, Business Analysis, SQL, Python, KPI Definition, ETL, Statistics

BI & Visualization: Power BI, Tableau, Excel (Pivot Tables, VLOOKUP)

Libraries & Frameworks: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, FastAPI

Databases & Cloud: MySQL, PostgreSQL, Google Cloud Platform(BigQuery)

Tools & Others: Git, APIs, Reporting, Product Management, AI & Workflow Automation (Zapier)

ACHIEVEMENTS

Winner, Hack-Wars 2025: Inter-college hackathon at Jalpaiguri Government Engineering College
